

**Tusitala Barcelona** is a company that wants to bring the hand fan to contemporary fashion and to the current ways of dressing, relating and moving. The fan is an accessory that transmits sophistication, femininity, freshness, joy, play, fashion, culture, character and many other concepts. With this aim we carefully prepare each collection, attentive to the trends in colors, shapes and patterns that the best *haute couture maisons* set.

Once the collections are decided, the designs are printed on cotton fabric of the best quality. Each piece is assembled in a traditional way on wooden sticks of polished fruit tree wood. The majority of our fans measure 23 cm closed; open approx. 43cm

The wood is alive, so the fan responds to the humidity of the air, the changes in temperature and the treatment it receives. The tone of the wood of the fans can vary from one to another, since the trees also have different shades.

#### Some suggestions.

If the fans are exposed wide open, we recommend closing them when the store is closed, or in the case of being in the storefront, change them often. They are not going to spoil, but if they are left open for a long time, then closing may cost a bit. If it should happen, just closing and storing them will help to recover the original tone.

Another topic about the fan is whether it slides correctly

when opening and closing. What is said is that "the fan gets educated", that is, that it adapts to the person who handles it. When they are new, opening and closing is usually slower; with the use it will adapt perfectly. Needless to say, the fan is a craft and should be treated with delicacy. Our fans do not make noise when giving air, which allows us to use them at any time without disturbing, when we are in a concert, to give an example ...

Thank you very much for choosing **Tusitala Barcelona!**
